

California OES Weather Threat Briefing

Tuesday, April 12, 2022
9:00 AM PDT

Day 1 (Tuesday): Accumulating snowfall will continue across some northern California mountain locations today, including down to elevations around 2,000 feet. Lingering gusty winds could cause minor impacts today, as well as elevated to locally critical fire weather conditions in southern California.

Minimal Impacts

Moderate Impacts

Severe Impacts

WEATHER KEY POINTS

04/12/22 - 04/18/22

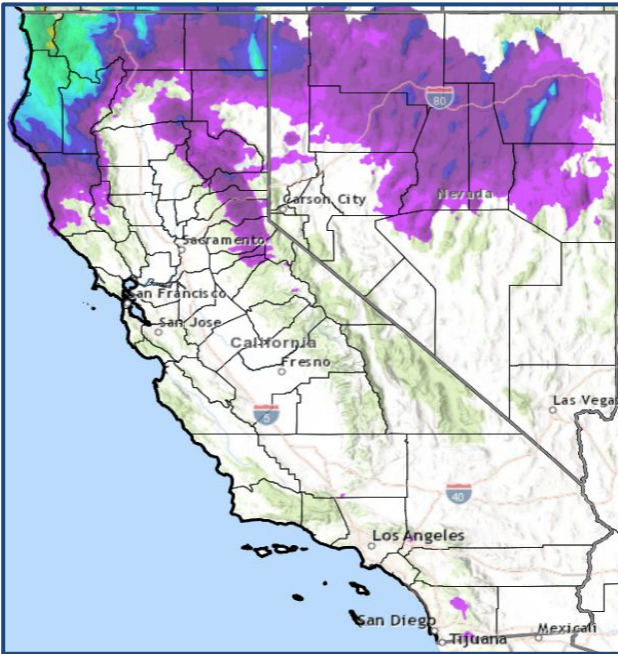

Tuesday- Monday

- Though the strongest winds across the state are decreasing significantly through Tuesday morning, some gusty north to northwest winds will linger through Wednesday, including across the northern coastal areas, along and east of the Sierra, and in the mountains of Southern Region
 - Gusts of 35 to locally 55+ mph are forecast in these areas at times, strongest through late Tuesday morning
 - Elevated to locally critical fire weather conditions are possible across portions of southern California Tuesday
- Periods of rain and mountain snow are expected at times for mainly the northern half of the state through Saturday, with some additional precipitation possible over northern California into early next week as well
 - Periodic travel impacts are likely in the northern California mountains due to accumulating snowfall
 - Snow levels will start quite low, generally either side of 2,000 feet through Wednesday, before rising toward 4,000 to 5,000 feet for late week and the weekend
- Additional rounds of gusty winds are expected Thursday through Saturday, particularly along and east of the Sierra where gusts of 35 to locally 50 mph are forecast

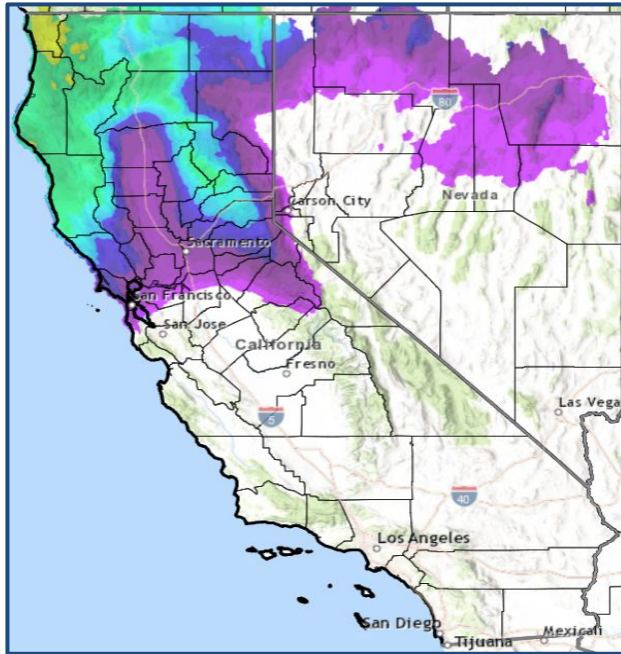

PRECIPITATION FORECAST

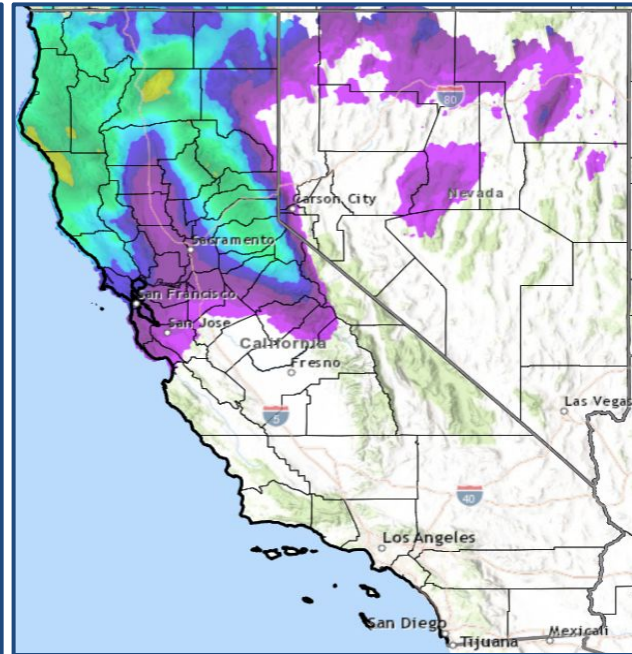

04/12/22 - 04/14/22

Tuesday

Wednesday

Thursday

Note: Forecast precipitation amounts are an average for any particular location. Thunderstorms may produce locally higher rainfall amounts.

Precipitation (inches)
